Consent Form Tattoos Empire-INK

Item 6: Risks of a Tattoo

Please read the following information carefully and inform the tattoo artist if you have any doubts about your suitability to be tattooed.

Tattooing and the healing process can come with risks and potential complications, as explained to you. You will be given aftercare instructions to help you minimize the effects.

It is normal for tattooing to be accompanied by pain, redness and swelling. If these symptoms worsen during the healing process, it could be a sign of infection and you should see a doctor.

Some complications may be related to your health situations. It is important for your safety that the tattoo artist is informed. Additional precautions may be required.

Tattoos are permanent and depending on the ink used, they may not be removed properly.

In case of doubt, treatment should be postponed and medical advice should be sought.

Do not get a tattoo:

| |
|--|
| <input type="checkbox"/> If you are pregnant or breast-feeding; |
| <input type="checkbox"/> If you are under the influence of alcohol or drugs; |
| <input type="checkbox"/> On a mole or scar left over from the removal of a melanoma. |

The following conditions or conditions may carry a higher risk of complications:

Skin: column 1

General disorders: Column 2

| | |
|--|--|
| A) Skin infection (regardless of location/type of infection) | Hemophilia or other clotting disease |
| B) Allergies (indicate whether you have an allergy, example latex/metal allergy and preservatives) | Epilepsy, heart disease |
| C) Areas of skin that are damaged or appear abnormal, including moles. | Known allergies (e.g. latex allergy) |
| D) Any skin diseases that are active (e.g. eczema, psoriasis) | Diabetes |
| E) Skin areas that have been subjected to plastic surgery/radiation therapy/scars & keloids | An autoimmune disease |
| F) Previously tattooed spot that has not fully healed. | Immunosuppressants and Committed Immune System Disorders |
| G) An area where a tattoo has recently been lasered or removed by another method if the wound has not yet healed | Sarcoidosis |

If any of the above conditions apply to you and you still want a tattoo, please consult your doctor first and seek advice.
